TapTone Product Advisory

Do you own one of the following TapTone systems?

- T500
- TapTone II
- TurboTRAK

TapTone would like to advise our customers that these legacy systems have been discontinued which may result in limited spare parts support. Users of these systems can upgrade the user interface only with one of the TapTone T550 upgrade kits available to support existing Proximity, Acoustic, and X-Ray sensors.

Upgrade kits come pre-wired to connect to the existing sensors for both RTV style (includes J-Box) or SSV style sensors using the existing tripod floor stand(s). These kits provide value, modern performance and peace of mind with a 1 year warranty replacing the user interface while reusing the existing sensors.

RTV Style User Interface Kit

SSV Style User Interface Kit
